

Hypothesis: For some exponential time bound T and some $\epsilon > 0...$	Implication :
RAM-TIME$[T] \not\subseteq \mathbf{1-TISP}[T^{1+\epsilon}, T^\epsilon]$	If the compression problem has a polynomial time algorithm, then incompressible strings can be constructed in polynomial time.
NTIME$[T] \not\subseteq \mathbf{1-NTISPG}[T^{1+\epsilon}, T^\epsilon, T^\epsilon]$	Incompressible strings can be constructed in polynomial time with an NP-oracle. In particular, $\mathbf{E}^{\mathbf{NP}} \not\subseteq \mathbf{size}[2^n/2n]$.
RAM-TIME$[T] \not\subseteq \mathbf{1-NTISPG}[T^{1+\epsilon}, T^\epsilon, T^\epsilon]$	Incompressible strings can be constructed in polynomial time with an oracle for the compression problem.
