

Thesis Title

Oliver Korten

Contents

1	Introduction	2
2	Stronger Cell Probe Lower Bounds via Local PRGs	3
3	The Hardest Explicit Construction	4
4	Strong vs. Weak Range Avoidance and the Linear Ordering Principle	5
5	Derandomization from Time-Space Tradeoffs	6
6	How to Construct Random Strings	7
7	Total Functions	8
8	Conclusion	9

Chapter 1

Introduction

Chapter 2

Stronger Cell Probe Lower Bounds via Local PRGs

Chapter 3

The Hardest Explicit Construction

Chapter 4

Strong vs. Weak Range Avoidance and the Linear Ordering Principle

Chapter 5

Derandomization from Time-Space Tradeoffs

Chapter 6

How to Construct Random Strings

Chapter 7

Total Functions

Chapter 8

Conclusion

Bibliography
